## Properties

- These cables make enormous advantages possible for fast and cost-effective contact-making using the Termi-Point ${ }^{\circledR}$ connection technique. With this solder-free connection technique, the stranded conductor is crimped together with a sleeve onto a contact pin without prior stripping of the insulation material
- The twisted-pair lay-up prevents electrical unbalances within the cable and this thus effectively suppresses cross-talking effects
- The materials used in manufacture are cadmium-free and contain no silicone and free from substances harmful to the wetting properties of lacquers

## Tests

- PVC outer sheath self-extinguishing and flame retardant acc. to DIN VDE 0482-332-1-2. DIN EN 60332-1-2, IEC 60332-1 (equivalent DIN VDE 0472 part 804 test method B)

## Note

- At 0,22 $\mathrm{mm}^{2}$ is designed for applications with Sub-D connectors
- Termi-Point ${ }^{\circledR}$ registered trade mark AMP.
- AWG sizes are approximate equivalent values. The actual cross-section is in $\mathrm{mm}^{2}$.

## Application

These PE-insulated data cables with twisted pairs are used in particular for the interference-free transmission of data and signals over longer distances. The high transmission rates are particularly suitable for RS 422 and RS 485 interfaces. These cables are suitable for fixed installations as well as for flexing applications, for free movement without forced motion and without tensile stress, in dry and moist environments but not in open air (Type grey).
EMC = Electromagnetic compatibillity
To optimize the EMC features we recommend a large round contact of the copper braiding on both ends.
C $\epsilon=$ The product is conformed with the EC Low-Voltage Directive 2006/95/EC.
